INCLUSIVE AUDIO DESCRIPTION

DEVELOPED **WITH AND FOR** THE VISUALLY IMPAIRED

Remove access barriers to private places by providing maximum information

AN APPLICATION FOR TAKING OWNERSHIP
of private spaces that receive the public

A SIMPLE AND INNOVATIVE SOLUTION

Blindsee innovates in the way you navigate through private spaces, stay informed about their points of interest, or make access easier to objects you want to highlight.

Whether it's a campground, a concert hall, a cinema, a theater, a business, or any other private space, Blindsee removes barriers to accessibility, especially for people with disabilities. It allows you to showcase your space, add value and visibility, and eliminate the need for a personal guide. For private spaces, the solution can be quickly and autonomously installed.

The simplicity of setting up the solution (tagging, descriptions) allows you to work in advance and preconfigure areas or zones. You can create and activate different levels or routes for users based on your preferences (e.g., relaxation area).

The Blindsee application : an aid in complying with legislation and regulations

✔ Open to everyone

Blindsee is universal and free for the user. No additional equipment is required, just a smartphone running Android or iOS.
The solution is compatible with all private establishments or spaces open to the public without the need for specific developments.

✔ Very low costs

The operating costs for the site are limited to a subscription fee. You may need to provide beacons if they are not already installed.

AN INCLUSIVE AUDIO GUIDE
Developed with and for the visually

Blindsee was developed in collaboration with an organization focused on individuals with visual impairments, and the interface was designed and tailored with input from blind and visually impaired users.

✔ Fast and intuitive navigation

The navigation is quick, simple, and effective. All interactions can be performed without needing to look at the screen. If desired, users can utilize the voice assistant Talkback or VoiceOver (automatic screen reading function).

✔ Ensuring compliance with the law

Legislation, since 2005, requires public establishments (ERP) to ensure that everyone, without distinction, can access, move around, and receive the information provided. Blindsee helps you meet this obligation.

✔ Value creation

Blindsee facilitates access for disabled audiences, enhancing their autonomy and providing a higher level of service. It also gives your private venue an innovative image with a new communication channel.

✔ Adapted to all locations

Blindsee is a flexible system that can be quickly installed. It is compatible with any configuration of outdoor or indoor spaces in your establishment.
